

Data-Driven 3D Primitives for Single Image Understanding

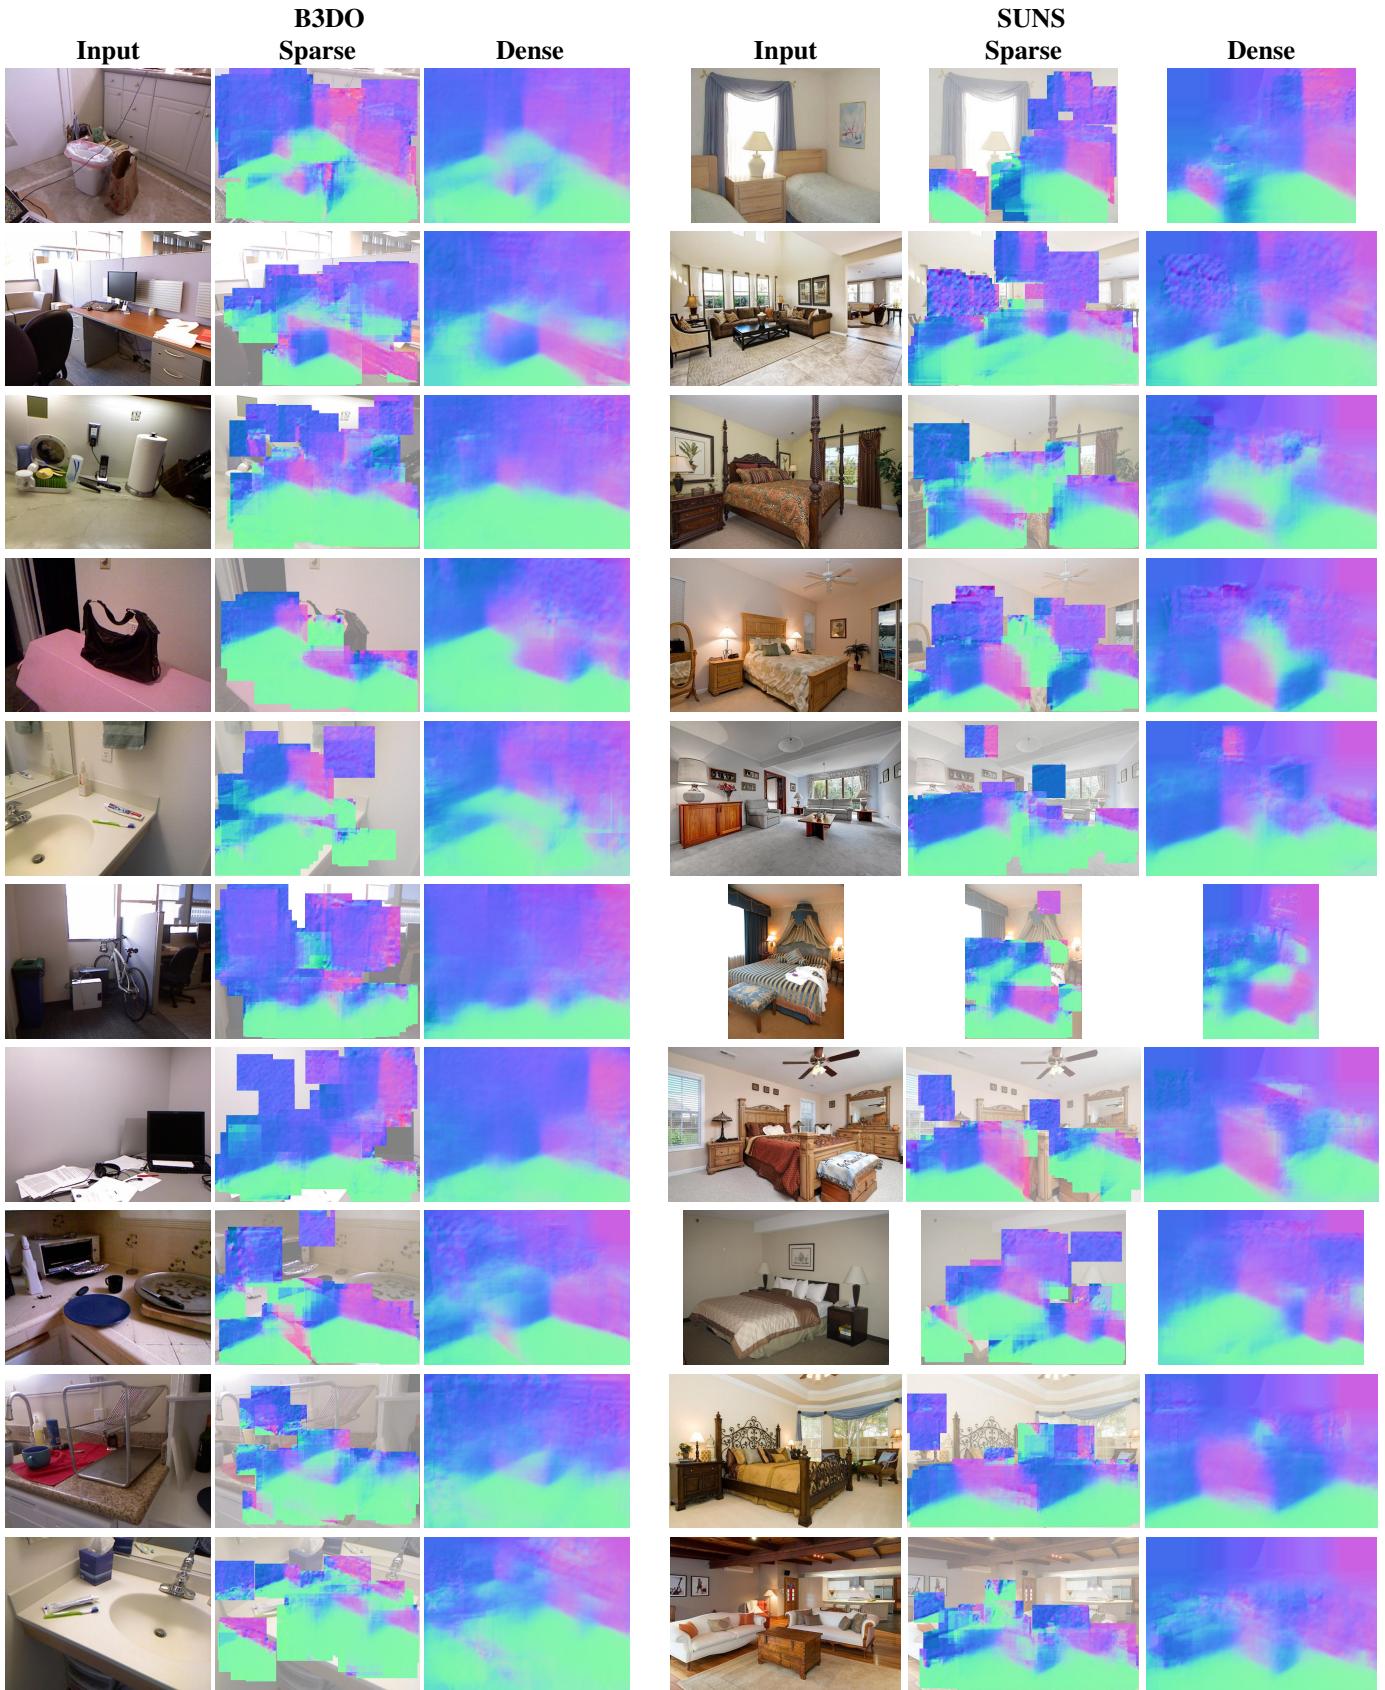

Additional Inference Results on SUNS and B3DO

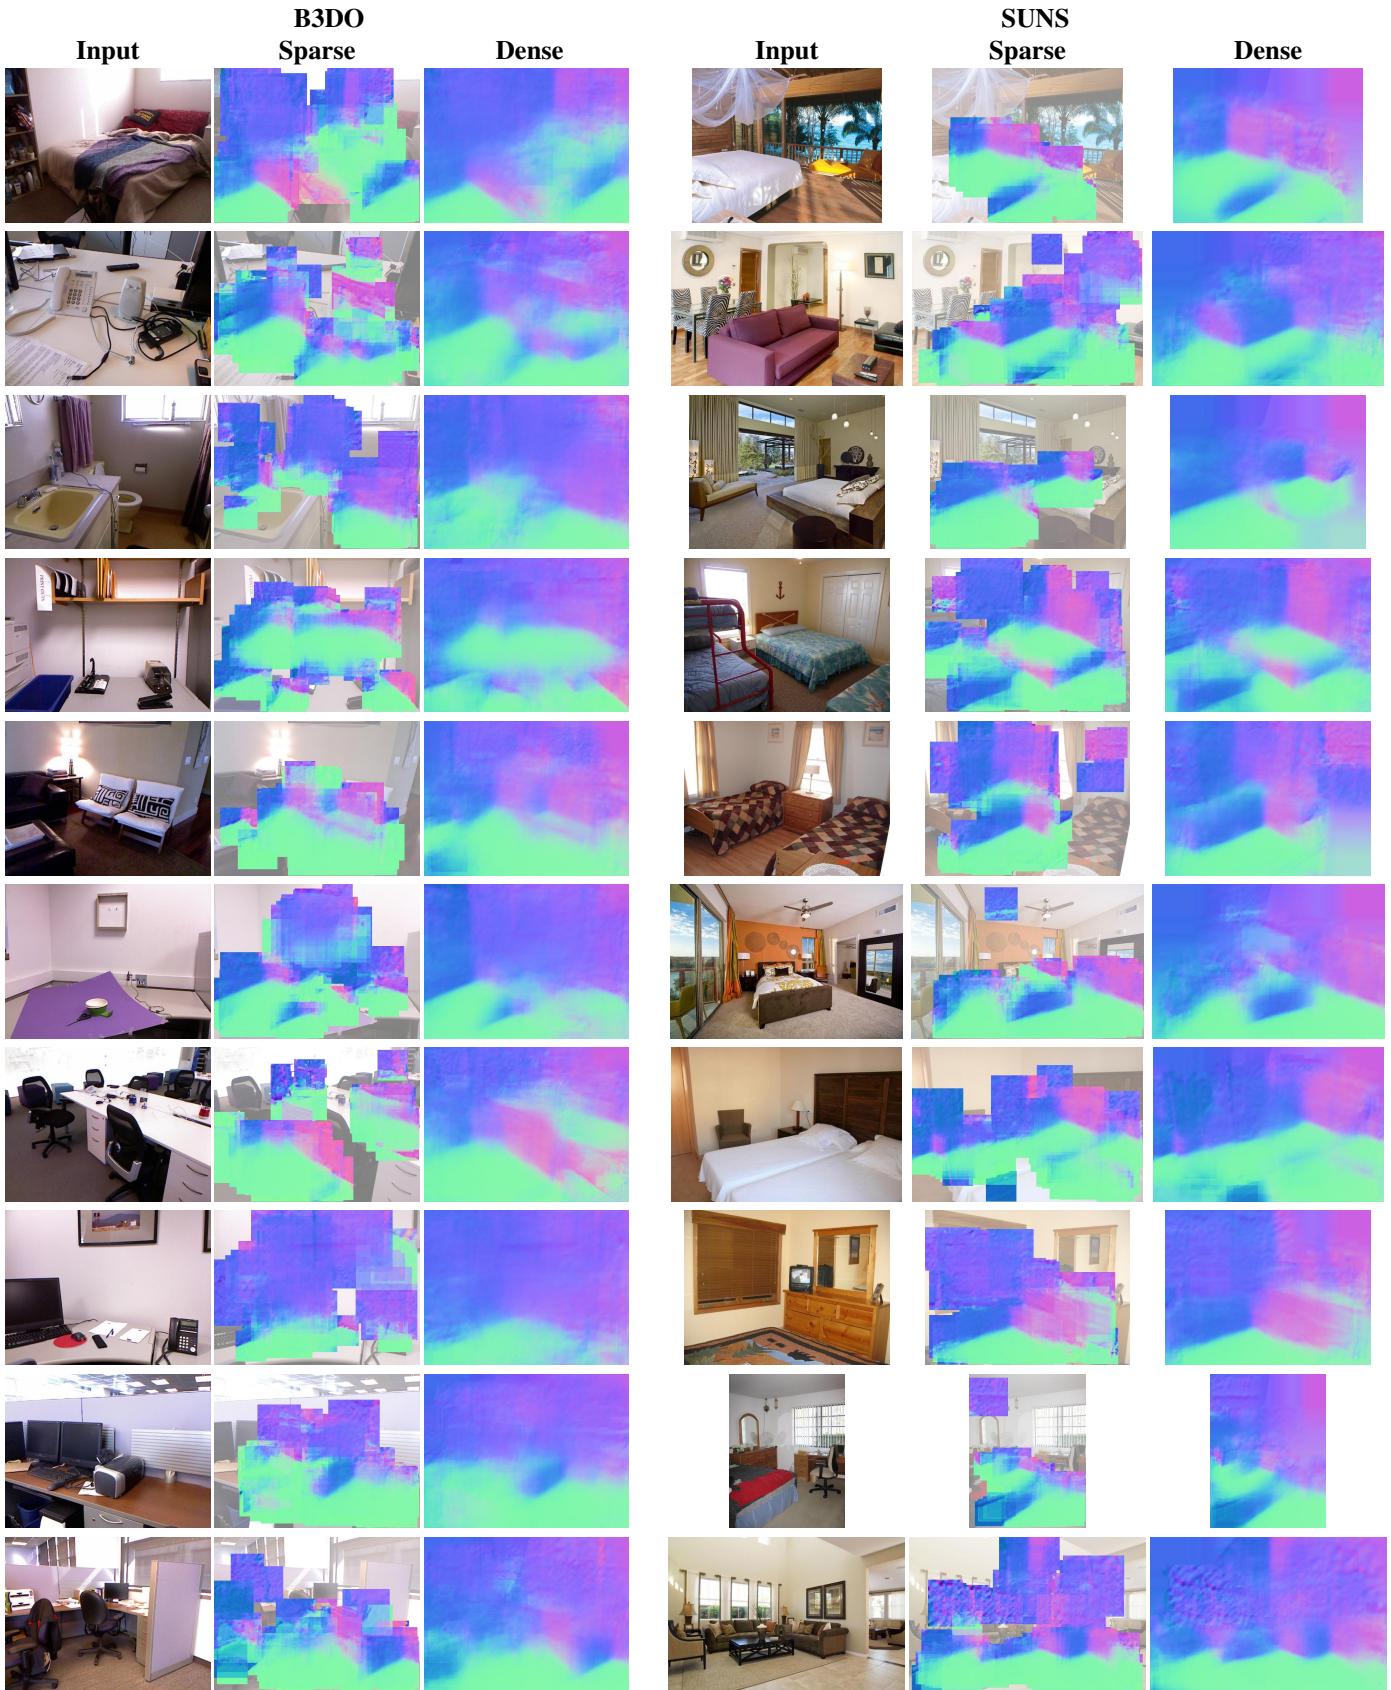

David F. Fouhey, Abhinav Gupta, Martial Hebert

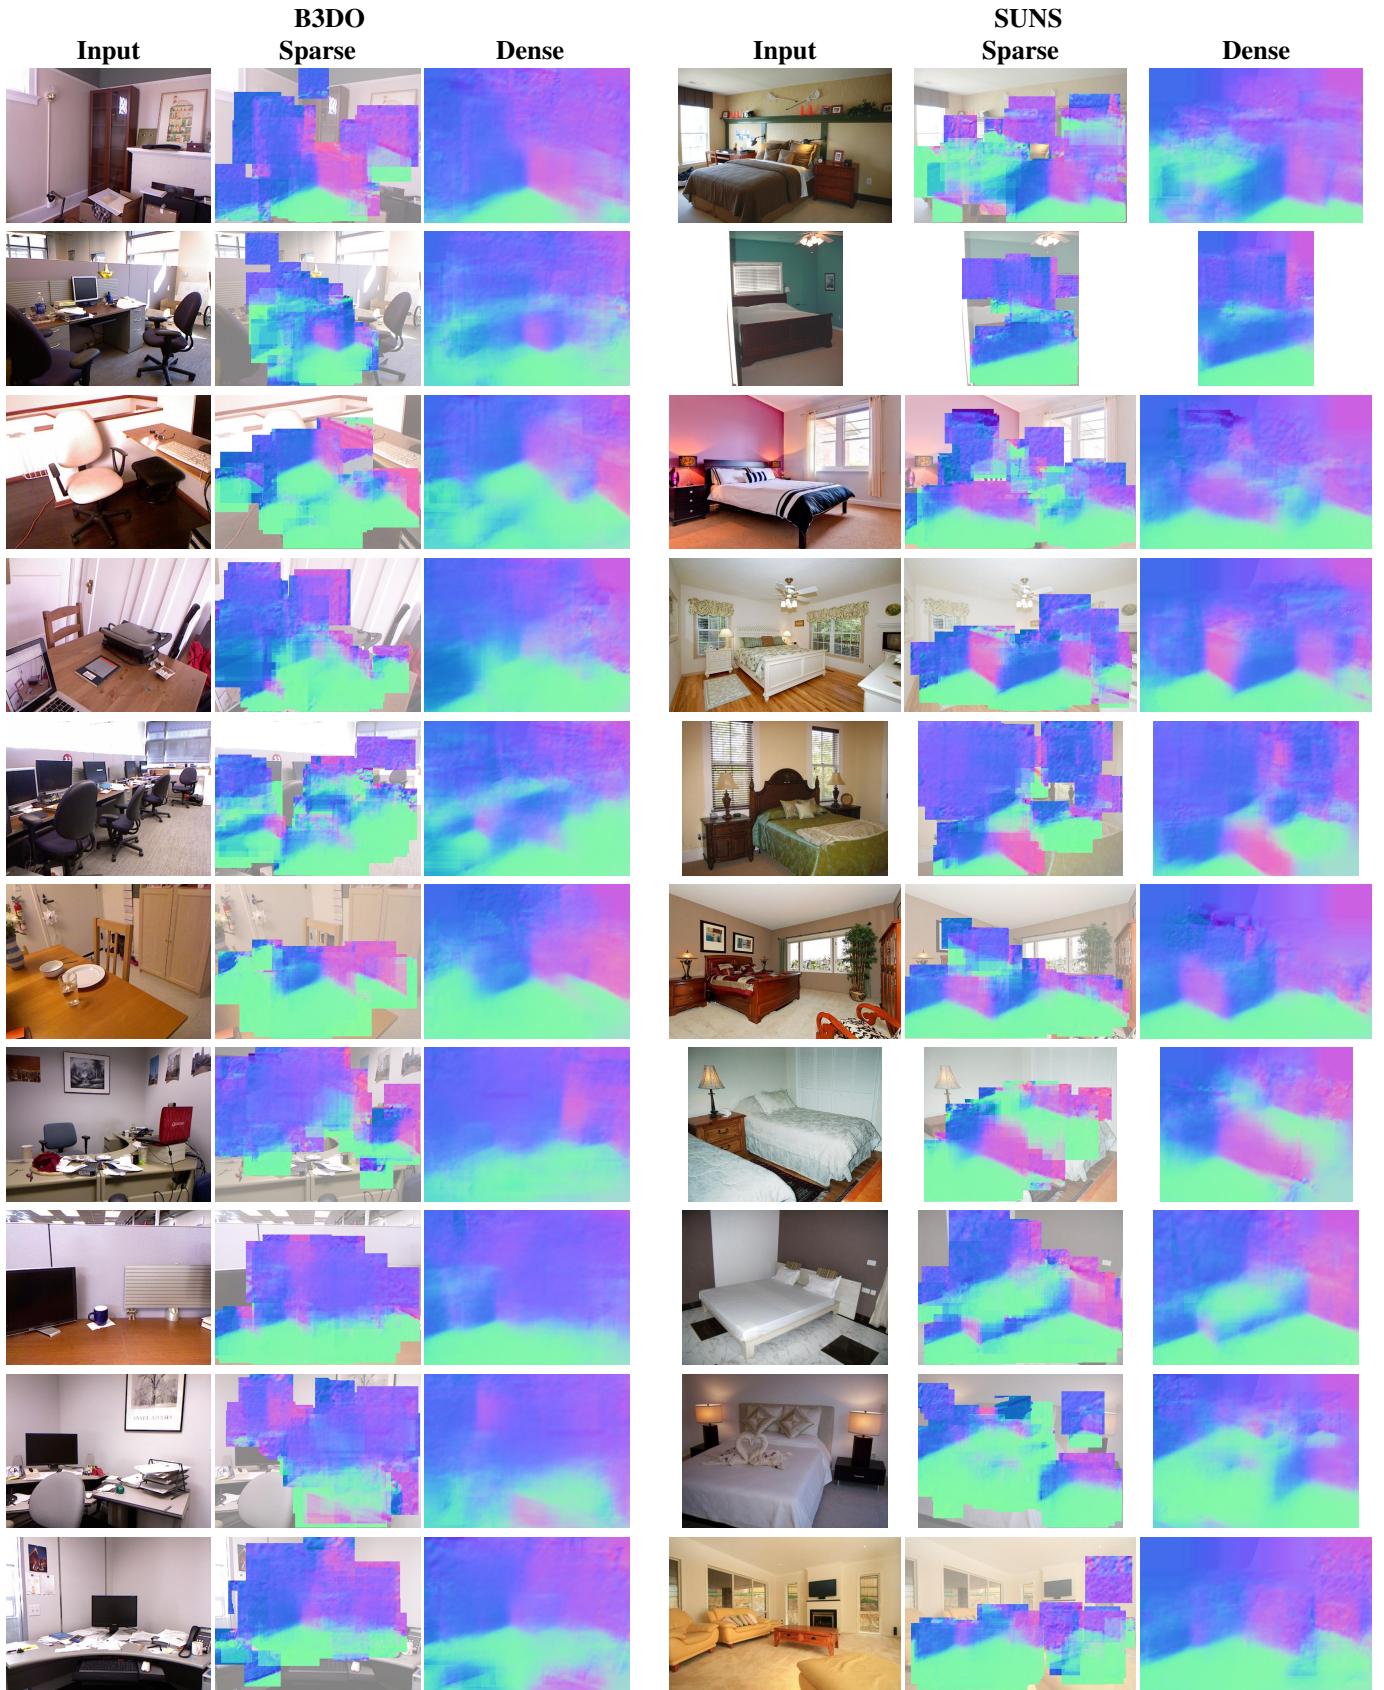

We first present the top 50 most confident results per dataset, training on the NYU v2 dataset and testing the other dataset. Confidence is the mean value of the weight image (i.e., the normalization constant Z), roughly equivalent to the number of detections, weighted by calibrated score. We then present results automatically selected among the remaining results, evenly spaced according to confidence.

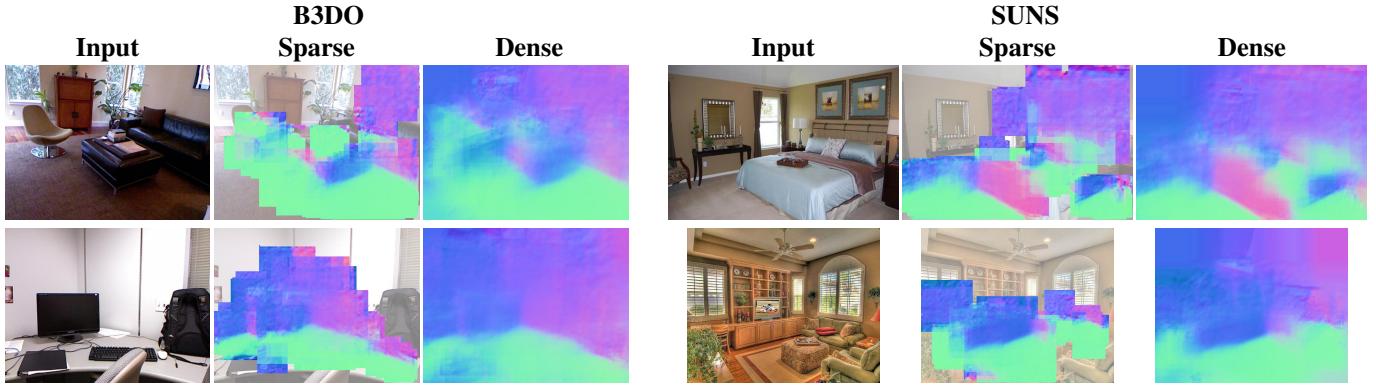

Evenly spaced results from the remainder of the dataset, sorted by confidence
B3DO **SUNS**
